

#061 Sinus Amoris

Rukl Map(s) #25

Image, below right, is a crop from my image 4616 taken 20171124, Day 5.9

https://en.wikipedia.org/wiki/Sinus_Amoris

Sinus Amoris (Latin for "Bay of Love") extends northward from the northeast end of the [Mare Tranquillitatis](#). It is located at selenographic coordinates 18.1° N, 39.1° E, and lies within a diameter of 130 km. To the north of the bay are the jumbled [Montes Taurus](#) peaks.

Near the southern end of the bay where it outlets into the Mare Tranquillitatis lies the crater [Theophrastus](#). Along the western side is the flooded crater [Maraldi](#) and [Mons Maraldi](#). Bordering the east side of the bay are the craters [Carmichael](#) and [Hill](#). There are some low ridges in the central part of the bay, but otherwise it is relatively featureless.

At the southern egress where the bay joins the mare lies [Mons Esam](#), a minor rise that lies among several small [lunar domes](#).
